Springer, UK. Hardcover. Condition: New. 592 pages. Available Now. Book Description: This book reviews the current status of research and development in dilute III-V nitrides. It covers major developments in this new class of materials within 24 chapters from prominent research groups. The book integrates materials science and applications in optics and electronics in a unique way. It is valuable both as a reference work for researchers and as a study text for graduate students.: From the Back Cover: A major current challenge for semiconductor devices is to develop materials for the next generation of optical communication systems and solar power conversion applications. Recently, extensive research has revealed that an introduction of only a few percentages of nitrogen into III-V semiconductor lattice leads to a dramatic reduction of the band gap. This discovery has opened the possibility of using these material systems for applications ranging from lasers to solar cells. Physics and Technology of Dilute III-V Nitride Semiconductors & Novel Dilute Nitride Material Systems reviews the current status of research and development in dilute III-V nitrides, with 24 chapters from prominent research groups covering recent progress in growth techniques, experimental characterization of band structure, defects carrier transport, transport properties, dynamic behavior of N atoms, device applications, modeling of device design, novel optoelectronic integrated circuits, and novel nitrogen containing III-V materials.: About the Author: Ayse Erol obtained her Ph.D. degree in 2002 from the Physics Department of the Istanbul University in Turkey. During her PhD studies, she joined to Prof. Naci Balkan's group for researches on Dilute Nitride Semiconductors as a Research Fellow in 2001. From 1998 to 2004 she was employed as Research Assistant at Istanbul University and in 2004 she promoted to Assistant Professor Position. Main research areas include semiconductor optoelectronics, vertical cavity surface emitting lasers, and...
